

## Call for Papers:

### Network Approaches to Interbank Markets

The 2007-09 global financial crisis has brought to the fore the instability of highly interconnected banking systems. The potential of contagious domino effects due to various channels of shock transmission within the banking system have become a major concern for macro-prudential regulation. The analysis of these connections requires new instruments of analysis that have not been widely used in economics before.

We thank all participants of our workshop and invite you to submit your paper to a special issue in the Journal of

## Computational Economics

All papers will be subject to the usual peer-review process.

## Paper submission

Please submit your paper until 31 August 2013 using the online submission system at

<http://www.springer.com/economics/economic+theory/journal/10614>

Upon submission indicate that you submit for the special issue "Network Approaches to Interbank Markets"
